

Peptides:

Ipamorelin

Overview:

- Body composition enhancement
- Increase in muscle tone/strength
- Decrease of body fat
- Use in weight-management patients
- Similar to GHRP but without the side effects

Ipamorelin is a selective GH-Secretagogue and ghrelin receptor agonist. The potency of ghrelin stimulation can be compared to GHRP6 with less appetite stimulation properties. However, unlike other GH-Secretagogues this pentapeptide doesn't release the same volumes of cortisol, acetylcholine, prolactin and aldosterone, which is why Ipamorelin has been considered the first and best selective GH secretagogue.

Combination Therapies for GH release/sleep

- Sermorelin

Combination Therapies for Body Composition

- Metformin
- Lipo-C
- Oxandrolone

Suggested Dose:

- Inject 200 mcg – 1000 mcg subcutaneously at night before bed
- Common dose: 500 mcg at night before bed

Ipamorelin	Strength	SKU	Price	Pharmacy
	5 mg - 5 ml	465-aps-5	\$99	APS
	15 mg - 7.5 ml	465-aps-15	\$165	APS
	9 mg - 9 ml	465-hal-9	\$195	Hallandale
Ipamorelin/Sermorelin	Strength	SKU	Price	Pharmacy
	15 mg/15 mg - 7.5 ml	934-emp-15	\$195	APS
	8 mg/12 mg - 8 ml	934-aps-8	\$145	APS
