

Sarcotropin to Support hGH Production

Sarcotropin is a liquid supplement designed to boost Human Growth Hormone (hGH) levels. Low hGH levels often lead to sarcopenia, or age-related decreases in strength and muscle mass. This therapy can be milder than utilizing hGH secretagogues, which may be preferable for some patients.

Sarcotropin Dosage Instructions

- Dosage: 4 mL daily at night.

Sarcotropin is available in liquid form. Because the ingredients can trigger relaxation, it's recommended to take Sarcotropin at night.

Sarcotropin comes in a 120 mL vial with approximately 30 doses.

Sarcotropin Ingredients

- Sarcotyn™ Blend
- Alpha-GPC (alphaglycerolphosphorylcholine)
